## TO WHOM SO EVER IT MAY CONCERN

This is to certify that C&S Electric Ltd. engaged in a CSR project with Technorbital to provide safe drinking water to a needy community using our “Techjal” water filters. For this project, the technical evaluation of the water purification solution was done by a team which included Ayush Vardhan Khanna. The project interactions took place from June – July 2019.

Being a student of Class 11 of Step by Step School, Noida, we were pleasantly surprised to find that Ayush had very keen interest in the technology of the product as well as its manufacturing process. We trained him on various water purity standards, water purification technologies and the nano-technology fundamentals utilized in our own product so that he and the team could make an objective evaluation.

Later in the process, he was highly inclined and actively participated during the installation process of water purification systems and presented the facts about our equipment and its related benefits to the assembled local communities in a very simple yet informative way.

Going forward Ayush will also analyze water quality reports from the rural sites on a monthly basis to confirm product performance and to be able to commit to further projects.

Overall, we found Ayush to be pro-active and well-researched in the field. His inherent interests in Chemistry and Biology allowed him to play a strong role within his team during the project with us. We wish him all the best.
